The screenshot shows an IDE window with a dark theme. The Explorer panel on the left shows a project structure with 'OUTPUT', 'JAVA', and 'Jc.java'. The main editor displays the code for 'Jc.java'. The code contains three public classes: 'HelloWorld', 'SumExample', and 'IfElseExample'. Each class has a 'main' method. The 'HelloWorld' class prints 'Hello, World!'. The 'SumExample' class takes two integers 'a' and 'b', calculates their sum, and prints it. The 'IfElseExample' class takes an integer 'number' and prints whether it is even or odd based on a modulo operation. The bottom status bar shows 'Keep Undo' and '1 of 1'.

```
1 public class HelloWorld {
2     public static void main(String[] args) {
3         System.out.println("Hello, World!");
4     }
5 }
6
7
8
9 public class SumExample {
10    public static void main(String[] args) {
11        int a = 5;
12        int b = 10;
13        int sum = a + b;
14        System.out.println("Sum: " + sum);
15    }
16 }
17
18
19 public class IfElseExample {
20    public static void main(String[] args) {
21        int number = 7;
22        if (number % 2 == 0) {
23            System.out.println(number + " is even.");
24        } else {
25            System.out.println(number + " is odd.");
26        }
27    }
28 }
```
